

CSIR COHORT SEROLOGICAL STUDY – ROUND II at CLRI

AIM:

As a part of the CSIR serological assay at CLRI, It would be important to know the current sero-positivity given that the cases of COVID 19 have drastically reduced across the country and to help in planning the vaccine implementation.

In view of this,

To assess the health status of their employees and their family members of CSIR – CLRI with respect to SARS-CoV-2 infection, it is proposed to do random blood sample collection for serology test (Round II) for CSIR-CLRI staff members and their family members, Research Scholars, Project assistants and Contractual staff members of CLRI.
